

A.W. Bell Machinery pride ourselves on building machines for the tough foundry environment, however a regular maintenance program is still important to keep them running at optimum efficiency. We are pleased to offer the following contract service for our range of machines within the North American region.

SERVICE INCLUDES;

- Inspection of all components
- Grease bearings as required
- Hydraulic filters check
- Written report with recommendations of further repair/replacement
- Inspect machine functions and adjust to OEM specifications
- Back-up machine PLC program and part storage data
- Productivity improvements training – ensure operators (old and new) know how to best utilise the machine
- Maintenance training – fault finding and maintenance tips to keep your machine running
